

Ancient strength and beauty combine in granite to make a dramatic design statement for interior and exterior use. With a visibly crystalline texture glittering with feldspar, mica and quartz, granite is an immensely strong stone particularly suitable for areas of high intensity wear or traffic.

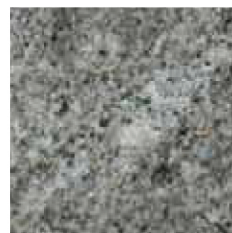

Our three most popular colour groups are Black, White and Red/Brown. Whilst we know the colour ranges in which the stone is available, each delivery is subtly different and we recommend that you view samples of our stone before purchase and allow for delicate colour changes in your design - this is, after all, a completely natural product.

Granite can be milled smooth or left with a naturally rough finish offering an excellent surface for traffic. Immensely resistant to wear, its versatility of colour and design produces a striking end result that will last. Granite improves with age and will retain its qualities for centuries to come.

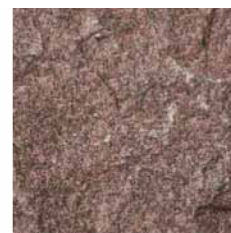

The investment in natural stone repays high quality professional laying. We offer a full installation service and advice on the care of your granite.
